

**Effective, Durable, Affordable Roofing**

Everlast Roofing, Inc. is a symbol of quality & innovation in metal roofing and siding. They have mastered the processes of Heat Forming™ Panels and Evercure™, as well as CECI® enhancement, leading the industry in producing quality metal building supplies.

### What is Evercure™?

Everlast Roofing, Inc. uses a process called Evercure™ that combines Heat Forming™, Tooling, and CECI® (Cut-Edge Corrosion Inhibitor) to provide superior barrier protection against corrosion.

### How does it work?

Heat Forming™ creates a more flexible paint system, which eliminates cracks and provides increased barrier protection. The manufacturing process combines advanced rollforming technology, tooling & techniques designed to produce the most consistent panel profile on the market. CECI® is a clear corrosion inhibitor which effectively decreases the corrosion rate of the factory cut-edge. It works by sealing the metal's cut-edge and also protects it from natural and corrosive elements.

### Why Evercure™?

As proven through industry research, Everlast's panels are stronger, more durable and less likely to crack over time. The goal at Everlast Roofing, Inc. is to incorporate cut-edge technological advances to their products to ensure the highest standard of quality. Evercure™ is just another step in their commitment to bringing the metal marketplace the finest materials in quality building components.

This is what makes Everlast Roofing the perfect choice for commercial, residential, agricultural, architectural, and industrial buildings.

Everlast Metal Roofing is made out of durable steel, which does not require any additional coating. It also comes primed and painted, ready for installation.

There are a variety of styles and colors available, including the Everlast II, Everloc and Everseam series (as seen above), which are thicker & more durable than most competitor's metal roofing.

Everlast II is available in 36" exposure, Everloc in 16" and Everseam in 20". All three can be cut to specified lengths, making it a custom fit for your home.

Metal roofing will protect your home against hurricane level winds. Many systems have independently verified wind uplift ratings between 110 - 160 mph.

**Warranty Information:**

Everlast II series has a 40 year crack, check, or peel warranty. Both Everloc & Everseam series have 35 year limited warranties. Most asphalt shingles have a 10-12 year non-prorated warranty.

**Many Benefits of Metal Roofing:**

- Extremely durable & can last a lifetime
- Require very little maintenance
- Safer for homes in harsh weather
- Lower your monthly energy bills
- Designs complement a wide variety of architectural styles
- And so much more!

**Metal Roofing vs. Asphalt Shingles**

Price estimates include panels only, no accessories.

**Everlast II 28ga. Series**

Starting at ~\$111 per square (100 square feet)

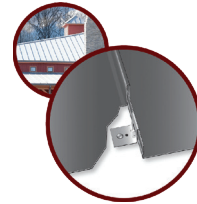

Also available: Economy and Bare

**Everloc 26ga. Series**

Starting at ~\$252 per square (100 square feet)

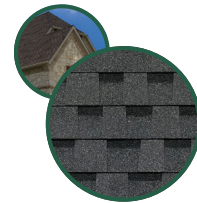

Also available: Bare

**Everseam 24ga. Series**

Starting at ~\$286 per square (100 square feet)

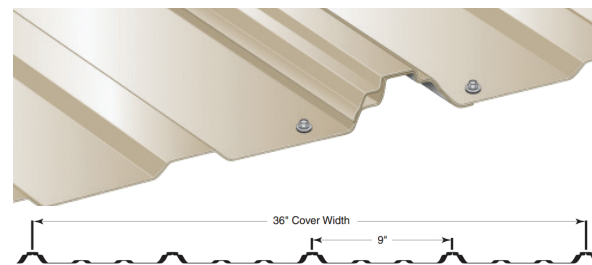

Also available: Bare

**Avg. Asphalt Shingles**

Approx. \$86 per square (100 square feet)

Costs associated with roofing accessories such as drip edge, screws, and underlayment will vary depending on your roof specifications.

**Common Metal Roofing Questions**

**1. Will it fit the style of my current home?**

Metal roofing is available in a wide range of colors and textures that are suitable for any architectural style. You will also find that the color selection is just as extensive as other popular materials, such as asphalt.

**2. Is it more expensive than other materials?**

It may cost more than the average asphalt shingle roof, but it will not need to be replaced or heavily maintained after installation. In fact, metal roofs can last well over 60 years!

**3. Are there better/longer-lasting materials?**

Non-metal roofing material begins to deteriorate as soon as it's exposed to the elements. A metal roof can withstand almost anything that Mother Nature throws its way.

**4. Do they perform poorly in bad weather?**

Metal roofs demonstrate incredible performance in a wide range of inclement weather conditions. They offer superior protection against wind, ice and snow in comparison to other popular roofing materials. In areas that get a lot of snow and ice, metal roofs offer unbeatable protection from ice dams, which can cost thousands of dollars in repairs. Metal roofing sheds snow extremely fast, and eliminates the possibility of ice backing up & leaking inside your home altogether.
